SILICA CAT LITTER

- Our silica can absorb all excrement and urine of pets and peculiar smell given off from them.
- They can also control the growth of bacterium and keep the surface of the sands dry and clean, so the pets may live in a safe and sanitary environment.

Strong deodorization

Prevent the spread of odor by absorbing water.

Manufacturing Process

- Step1: the vitriol and sodium silicate react to make silica gel
- Step2: aging
- Step3: cutting
- Step4: washing by water
- Step5: drying
- Step6: selecting by sieve
- Step7: examining
- Step8: packing

TOFU CAT LITTER

- Our Tofu Cat Litter is made with natural tofu, 99% dust free and biodegradable materials. Healthy and safe. Remarkable absorption and odor control.
- No chemical contains, you can rest easy knowing that your cat will not be harmed in any way.

Each one of us are willing to be your honest advisor.

- 🌀 Quick Clumping
- 🌿 Superb Odor Control & 99% Dust Free
- 💧 Strong Water Absorption
- ♻️ Eco-Friendly

CASSAVA CAT LITTER

Cassava cat litter is made from cassava starch and corn starch, two food grade ingredients are completely natural, renewable, biodegradable and compostable.

Smooth surface, natural soft pay-feeling like stepping on rice.

99% dust free, more clean for your house.

It quickly absorbs the cat's urine in seconds and forms compact clumps(less odor after use) to ensure the odor is sealed tight.

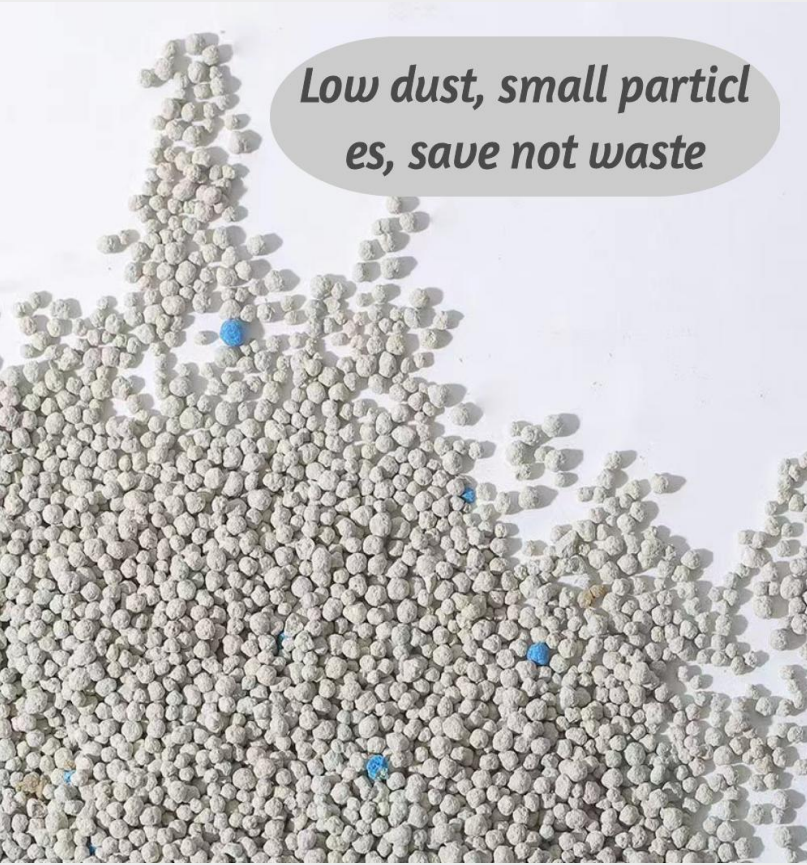

Easy to scoop and firm clumping, tight clumps lock in odors that they can easily be scooped out without breakiing or crumbling.

Ultra long lasting, smaller particles and less dosage.

BENTONITE CAT LITTER

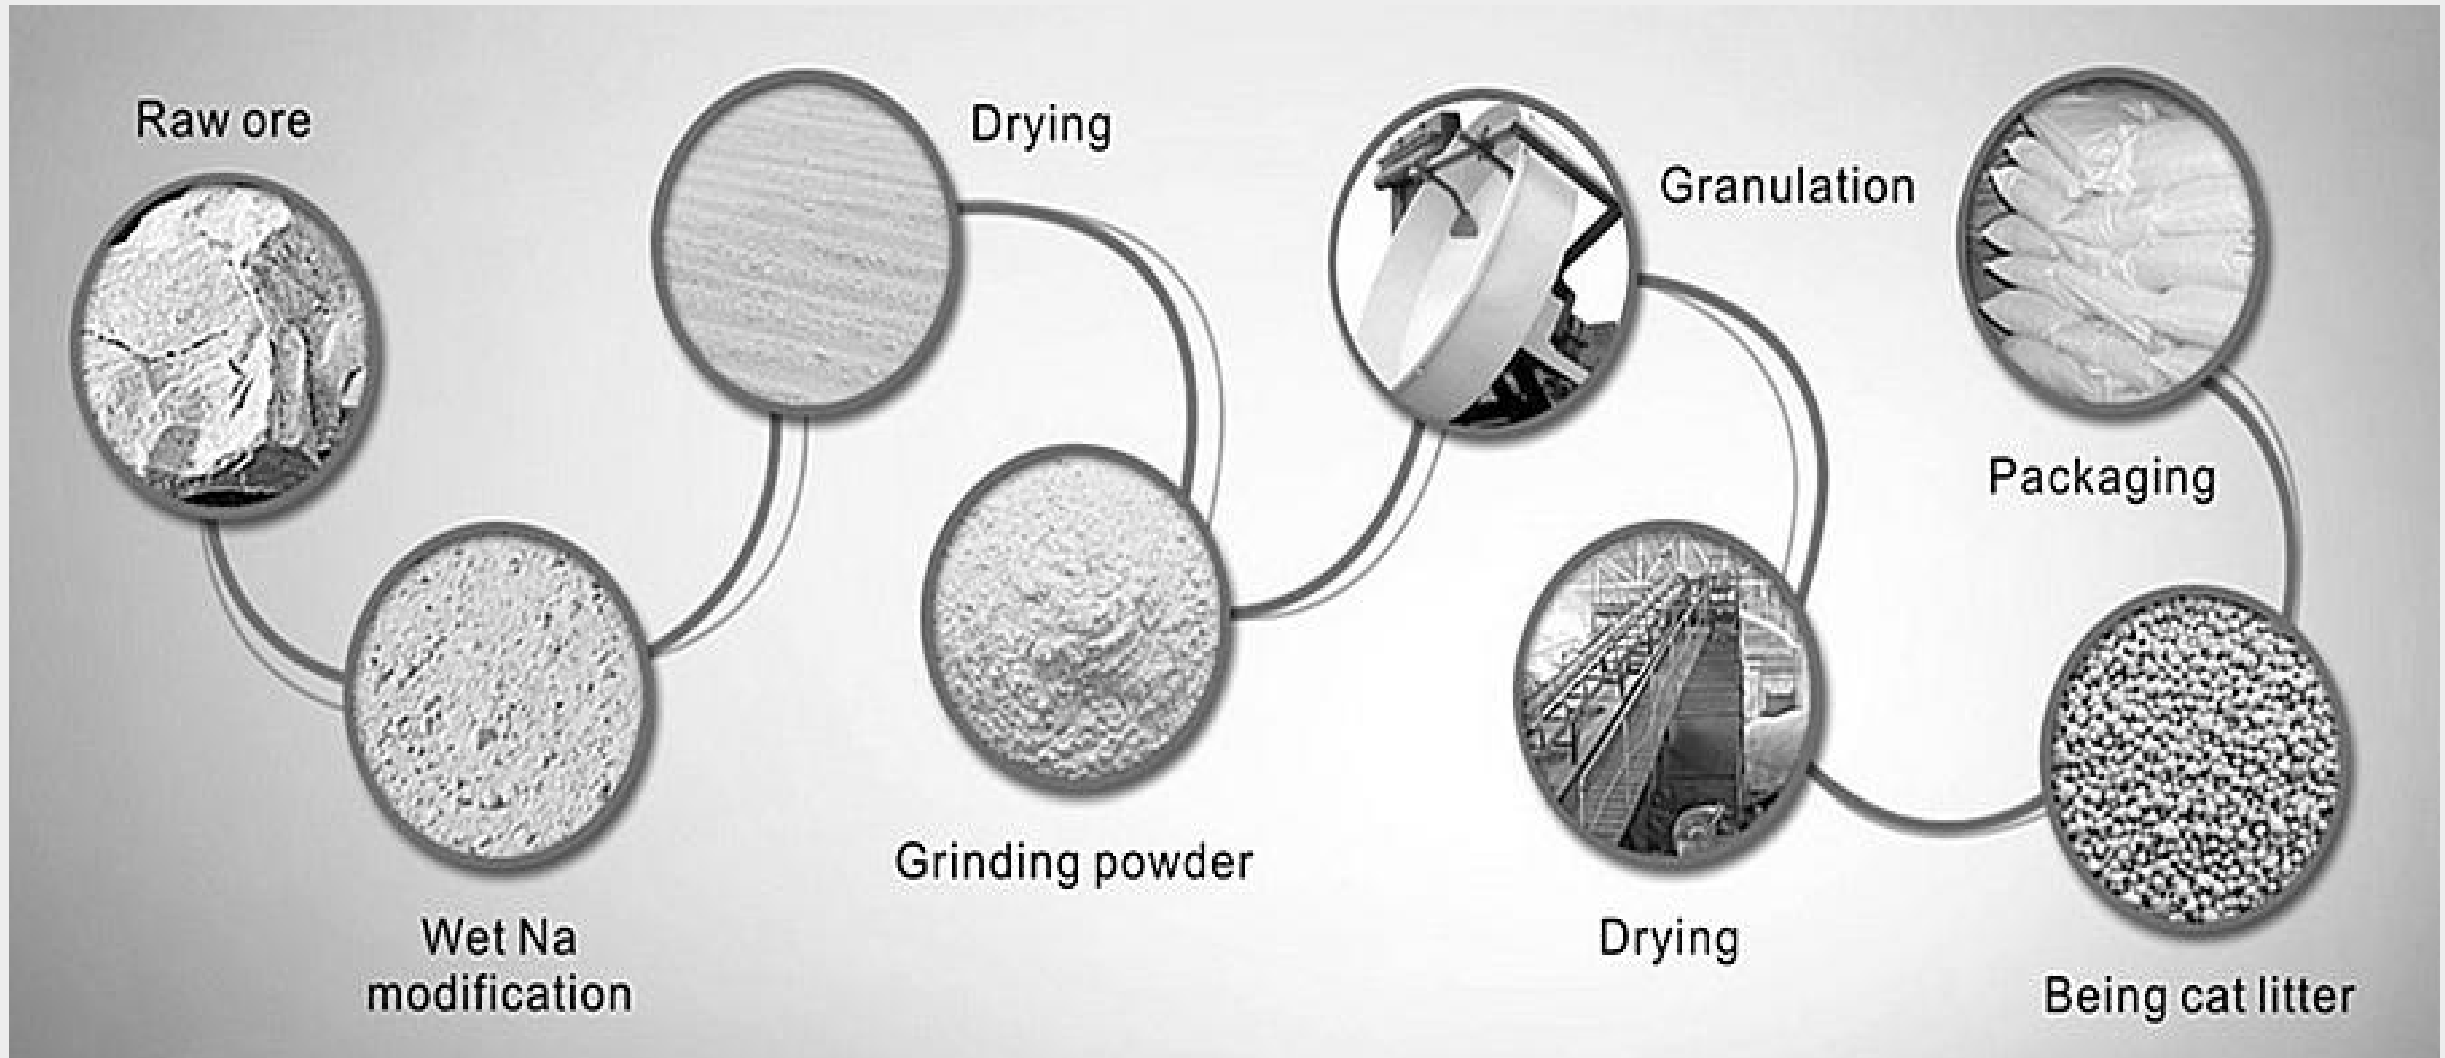

Low dust, small particles, save not waste

- Our Ball-shaped Bentonite Cat Litter produced by our company is made of 100% natural bentonite clay, after high temperature sterilization, Eco-friendly .
- Super odor control leaving the surrounding fresh with fragrance. Clumping can quickly absorb. Our sand dust free rate can be up to 99.9%. Added into several flavors including apple, rose, lavender and lemon, etc.

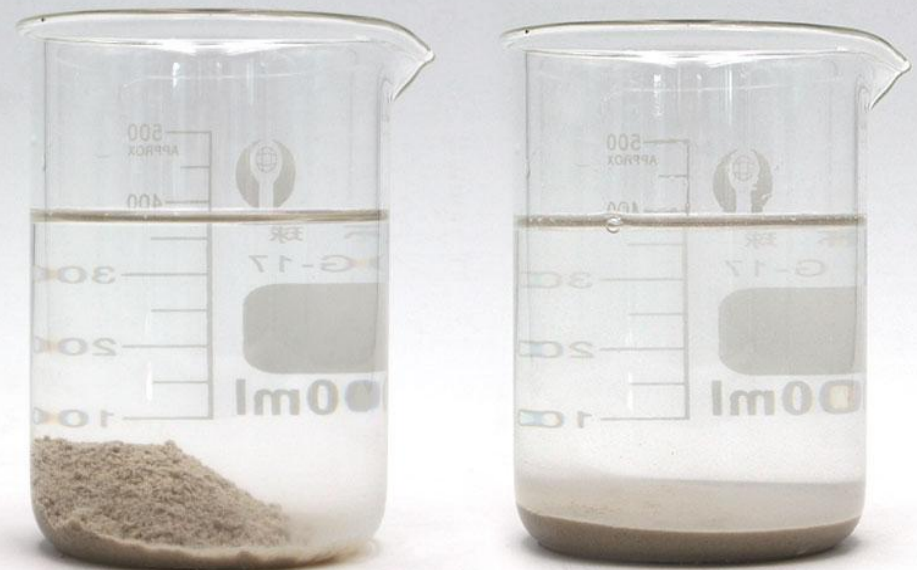

Manufacturing Process

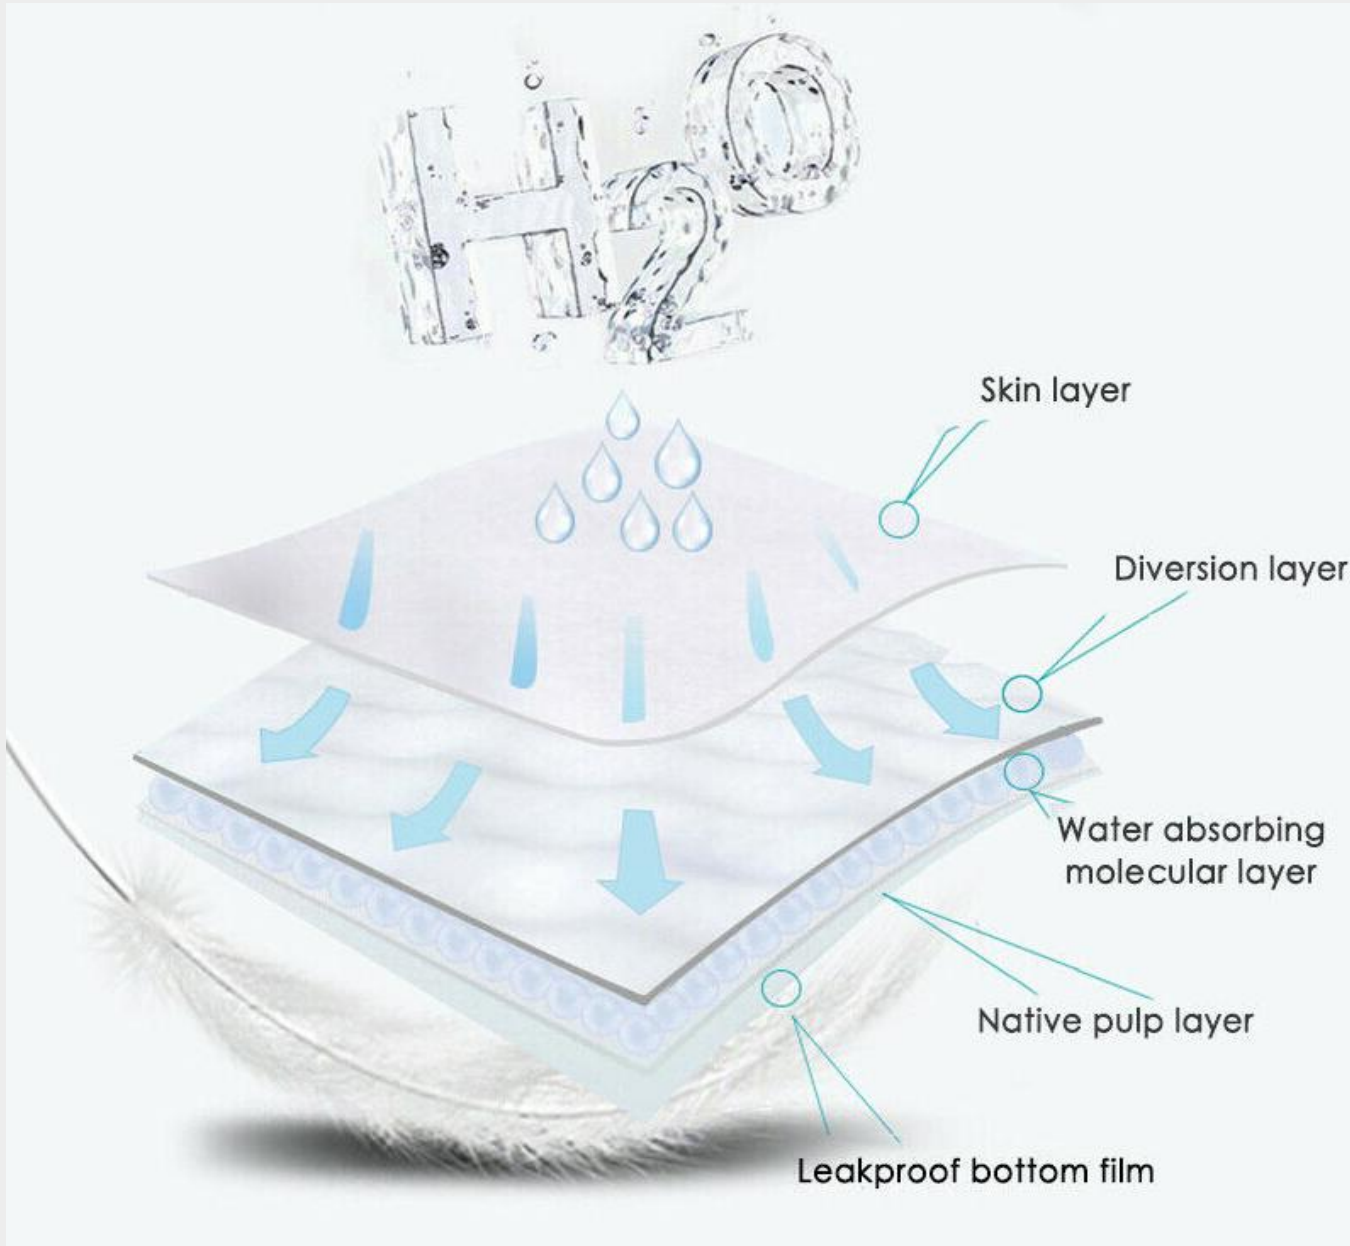

Rapid dissolution

Once the clumps come in contact with an amount of water, it will quickly start to dissolve and form a soft residue that can be flushed and not clogging the system.
